RESULT R90951

S

Factor VIII antigenic peptide corresp. to residues Glu1885-Phe1891. Factor VIII antigenic polypeptide fragments and epitope(s) - also inhibitors of factor VIII and anti-inhibitors, useful for e.g. preventing and treating immune disorders involving inhibition of factor VIII binding Factor VIII; modification; inhibitor activity; binding; antibody; von Willebrand factor; immune disorder. (CROI-) CROIX ROUGE BELGIQUE. 94BE-0000666. 95WO-BE00068 Laub R; 09-SEP-1996 (first entry) WPI; 1996-105861/11. Di Giambattista M, WO9602572-A2. 14-JUL-1995; 14-JUL-1994; 01-FEB-1996. Synthetic. 1 wyf

                                                                                                                                                                  ö
         Peptides R90945-64 are derived from the factor VIII protein, esp. from a modified Factor VIII in which residues Ala322-Ser750, Leu1655-Arg1689, Lys1694-Pro1782 and Asp2170-Tyr2332 are deleted. The modified Factor VIII and derived peptides can be used to prevent the activity of inhibitors of factor VIII binding to von Willebrand factor, esp. antibodies, thus preventing or treating immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The sequences given in R38104-21 represent protease-non-labile amino acid segments which may be substituted into the wild-type lipase protein of Humicola lanuginosa strain DSM 4106 at position 209-212 (see also R38101). The lipase resulting from these substitutions has improved stability against proteolytic degradation and is suitable for use in detergent compositions especially when used in conjunction with a protease.
                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                 Protease-labile; lipase; Humicola lanuginosa; strain DSM 4106;

Peptides represented by the formula (KFmoc)WYX, where X is any L-or D-amino acid and KFmoc is fluorenylmethoxycarbonyl-lysine, were synthesized and screened for anti-microbial activity against Escherichia coli. The present peptide showed anti-microbial activity with an IC50 value (concentration necessary to inhibit 50 per cent growth of bacteria) of 116 microg/ml. The invention provides peptides having anti-melittin activity with IC50 values of less than 30 microg/ml which are useful for treating melittin poisoning. Melittin is the active compound in bee yenom and causes cell lysis. Peptides having anti-melittin activity have one of the following formulae; Ac-IVILEZ-NH2; Ac-IVILEZ-NH2; Ac-IVINEZ-NH2; Ac-IVIQEPV-NH2; Ac-IVIQEPV-NH2; Ac-IVIQEPV-NH2; Ac-IVIQEPV-NH2; Ac-WIQIFI-NH2; where Z = an optionally methylated or chlorinated D-form or natural amino acid; Z1= F or I; Z2= I or Q; Z3= W or Y and Z4=C or F.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0; Gaps

The peptide can be used in an oral care composition, comprising the peptide and an excipient. The peptide can be used to prevent or reduce bacteria adherence to teeth and/or coaggregation between plaque forming bacteria. It is useful for reducing or preventing periodontal disease, plaque, dental implant infection and dental caries when applied topically to tooth surfaces and/or tissues of the oral cavity. An effective dosage of the peptide is 0.02-0.1 g. Dimeric and cyclomonemeric anti-adherence peptides exhibit enhanced stability to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents a peptide with anti-adherence activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            the acidic conditions and proteases which exist in the oral cavity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Anti adherence; oral care; dimer; cyclo monomer; polymer; plaque; periodontal disease; dental implant infection; dental carles; bacteria; teeth.
                                                                                                                                                                                           Anti adherence; oral care; dimer; cyclo monomer; polymer; plaque; periodontal disease; dental implant infection; dental caries;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New peptide(s) and their dimers, cyclo-monomer(s) and polymers useful for treating periodontal disease, plaque, dental implant infection and dental caries
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             55.8%; Score 24; DB 18; L

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The patent discloses the following new peptides, which are opioids which bind specifically to the mu receptor: Ac-Phe-Arg-Trp-Trp-Try-Xaa-NH2 (1);

Ac-Arg-Trp-Inc-G1y-Trp-Xaa-NH2 (2); Trp-Trp-Pro-Try-Trp-Trp-Trp-1(3);

Trp-Trp-Pro-Xaal-NH2 (4); Tyr-Pro-Phe-G1y-Phe-Xaa-NH2 (5);

Trp-Trp-Pro-Met-D-Trp-G1y-Xaa2-NH2 (6);

D-I1e-D-Met-D-Trp-Trp-G1y-Xaa2-NH2 (6);

D-I1e-D-Met-D-Trp-Trp-G1y-Xaa2-NH2 (7); Tyr-Al-B2-C3-NH2 (214);

Pm and red ((Me)X(H)y-Tyr-(NMe)z-Tyr-(Xaa3)z-NH2) (221); and

Trp-Trp-Pro-D4-(His)z-(Xaa)z-NH2 (222); Where Xaa = any natural amino

C Trp-Trp-Pro-D4-(His)z-(Xaa)z-NH2 (222); Where Xaa = any natural amino

acid; Xaal = Lys or Arg; n and z = 0 or 1; Xaa2 = G1y or the D form of

any naturally occurring amino acid; Al = D-norvaline or D-norleucine;

C any naturally occurring amino acid; Al = D-norvaline or D-norleucine;

C acid; Xaal = Lys or Arg; n and z = 0 or 1; Xaa2 = G1y or the D form of

any naturally occurring amino acid; Al = D-norvaline or D-norleucine;

C acid; Xaal = Lys or Arg; n and z = 0 or 1; Xaa2 = G1y or the D form of

any naturally occurring amino acid; Al = D-norvaline or D-norleucine;

C acid; Xaal = Lys or Arg; n and z = 0 or 1; Xaa2 = G1y or the D form of

assay and study of opiate receptor subtypes, particularly mu receptors

C in the Brain; (ii) for in vivo localisation of receptor subtypes; and

(iii) therapeutically to block the peripheral effects (e.g. constipation

c and prurtus) of centrally acting paln killers such as morphine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

The present sequence represents a peptide with anti-adherence artivity. The peptide and be used in an oral care composition, comprising the peptide and an excipient. The peptide can be used to prevent or reduce bacteria adherence to teeth and/or coaggregation between plaque forming bacteria. It is useful for reducing or preventing periodontal disease, plaque, dental implant infection and dental caries when applied topically to tooth surfaces and/or tissues of the oral cavity. An effective dosage of the peptide is 0.02-0.1 g. Dimeric and processed the acidic conditions and proteases which exist in the oral cavity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents a peptide with anti-adherence activity. The peptide can be used in an oral care composition, comprising the peptide and an excipient. The peptide can be used to prevent or reduce bacteria adherence to teeth and/or coaggregation between plaque forming bacteria. It is useful for reducing or preventing periodontal disease, plaque, dental implant infection and dental carries when applied topically to tooth surfaces and/or tissues of the oral cavity. An effective dosage of the peptide is 0.02-0.1 g. Dimeric and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Anti adherence; oral care; dimer; cyclo monomer; polymer; plaque; periodontal disease; dental implant infection; dental caries;

                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents a peptide with anti-adherence activity. The peptide can be used in an oral care composition, comprising the peptide and an excipient. The peptide can be used to prevent or reduce bacteria adherence to teeth and/or coaggregation between plaque forming bacteria. It is useful for reducing or preventing periodontal disease, plaque, dental implant infection and dental caries when applied topically to tooth surfaces and/or tissues of the oral cavity. An effective dosage of the peptide is 0.02 - 0.1 g. Dimeric and cyclomonomeric anti-adherence peptides exhibit enhanced stability to the acidic conditions and proteases which exist in the oral cavity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a peptide with anti-adherence activity. The peptide can be used in an oral care composition, comprising the peptide and an exciptent. The peptide can be used to prevent or reduce bacteria adherence to teeth and/or coaggregation between plaque forming bacteria. It is useful for reducing or preventing periodontal disease, plaque, dental implant infection and dental caries when applied topically to tooth surfaces and/or tissues of the oral cavity. An effective dosage of the peptide is 0.02-0.1 g. Dimeric and cyclomonomeric anti-adherence peptides exhibit enhanced stability to the acidic conditions and proteases which exist in the oral cavity.
                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
cyclomonomeric anti-adherence peptides exhibit enhanced stability to the acidic conditions and proteases which exist in the oral cavity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Anti adherence; oral care; dimer; cyclo monomer; polymer; plaque; periodontal disease; dental implant infection; dental caries;

The peptide can be used in an oral care composition, comprising the peptide and an excipient. The peptide can be used to prevent or reduce bacteria anderence to teeth and/or coaggargation between plaque forming bacteria. It is useful for reducing or preventing periodoutal disease, plaque, dental implant infection and dental caries when applied topically to tooth surfaces and/or tissues of the oral cavity. An effective dosage of the peptide is 0.02-0.1 g. Dimeric and cyclomonomeric anti-adherence peptides exhibit enhanced stability to the acidic conditions and proteases which exist in the oral cavity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents a peptide with anti-adherence activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Caps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Anti adherence; oral care; dimer; cyclo monomer; polymer; plaque; periodontal disease; dental implant infection; dental carles; bacteria; teeth.

The patent discloses eight new groups of opioid peptides which bind to the mu-receptor to act as agonists or antagonists. The peptides can be used for in-vitro assays to study opiate receptor subtypes (especially the mu type) in brain or other tissue samples; and for in-vivo diagnosis to localise opioid subtypes. The peptides are also useful as drugs to treat pathologies associated with other compounds which interact with the opioid receptor system. Therefore they can be used in medicaments for treating pathologies associated with the mu receptor and as analgesics. They can be used therapeutically to block the peripheral effects of centrally acting pain killers, e.g. 10 prevent side effects such as constipation and pruntitis associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Leader sequence 50, development of substances against Bundyaviridae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    with morphine. The present sequence represents a specific example of one of the new groups of peptides, of formula Ac-Phe-Arg-Trp-Tyr-Xaa-NH2 where Xaa = a naturally occurring
                                                                                                                                                New mu opioid receptor binding ligand peptide(s) - useful for in-vitro and in-vivo diagnosis, as analgesics, and for blocking peripheral effects of centrally acting drugs, e.g. morphine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Selection of target pathogen inhibiting substances - useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Virus inhibitory peptide; inhibition; ligand library; competitive affinity-elution; prophylactic substance; combinational therapy; pathogen diagnosis; leader molecule.

The peptide can be used in an oral care composition, comprising the peptide and an excipient. The peptide can be used to prevent or reduce bacteria adherence to teeth and/or coaggregation between plaque forming bacteria. It is useful for reducing or preventing periodontal disease, plaque, dental implant infection and dental caries when applied ropically to tooth surfaces and/or tissues of the oral cavity. An effective dosage of the peptide is 0.02-0.1 g. Dimeric and cyclomonearic anti-adherence peptides exhibit enhanced stability to the acidic conditions and proteases which exist in the oral cavity.

                                                                         This is a peptide which is useful as a leader molecule. It is used for the development of substances active against enveloped pathogens such as viruses from the family Bundyaviridae. Its selection involved the reaction of a ligand library with the bound target pathogen and the pathogen bound ligands are subjected to competitive affinity-elution with at least one neutralising substance. The method is useful for comparative drug design to provide therapeutically active, protective and/or prophylactic substances and developing combinational therapies as well as for pathogen diagnostics. The method also identifies "leader molecules", which not only have great affinity, but also mimic the functions of known neutralising substances.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The specification describes opioid peptides, in which each of the N atoms in the peptide backbone between respective amino acids is modified by permethylation, perallylation, perethylation perbenzylation

and pernaphthylation. The peptides inhibit ligand binding to an oploid receptor. Specifically, the peptides inhibit the micro-selective opioid peptide enkephalin. The peptides can be used in vivo diagnostically to localize opioid receptor subtypes. They can be used to treat pathologies associated with other compounds which interact with the opioid receptor system. The peptides are especially useful for blocking the peripheral effects of centrally acting pain killers such as morphine. Y22984-Y23003 represent optoid peptides of the invention, and are derived from the general sequence given in Y22983.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This is a peptide which is useful as a leader molecule. It is used for the development of substances active against enveloped pathogens such as viruses from the family Bundyaviridae. Its selection involved the reaction of a liquand library with the bound target pathogen and the pathogen bound ilgands are subjected to competitive affinity-elution with at least one neutralising substance. The meri of is useful for comparative drug design to provide therapeutically a protective and/or prophylactic substances and developing combinational theraptes as well as for pathogen diagnostics. The method also identifies a leader molecules, which not only have great affinity, but also mimic the functions of known neutralising substances.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Leader sequence 51, development of substances against Bundyavirida,

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-1- FUNCTION: EXHIBITS UNUSUAL SHARK REPELLENT AND SURFACTANT PROPERTIES. FORMS VOLTAGE-DEPENDENT, ION PERMEABLE CHANNELS IN MEMBRANES. AT HIGH CONCENTRATION CAUSES CELL MEMBRANE LYSIS.
-1- SUBUNIT: MONOMER. IN AQUEDOUS SOLUTION EXISTS AS A TETRAMER.
-1- SUBCELLULAR LOCATION: SECRETED.
-1- SIMILARITY: BELONGS TO THE PARBAXIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Eukaryota; Viridiplantae; Embryophyta; Tracheophyta; Spermatophyta;

Identification of all the proteins in the large subunit of an organelle (chloroplast) ribosome.";
J. Biol. Chem. 0:0-0(2000).
I. Biol. Chem. 0:0-0(2000).
I. SINILARION: THIS PROFEIN BINDS DIRECTLY TO 23S RIBOSOWAL RNA.
II SSUBCELLULAR LOCATION: CHLOROPLAST AND OTHER PLASTIDS.
II TISSUE SPECIFICITY: EXPRESSED IN ALL PLANT TISSUES.
II SIMILARIYY: BELONGS TO THE LIOP FAMILY OF RIBOSOMAL PROTEINS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 8, Application US/08473702
Patent No. 5928861
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Hadlock, Kenneth G.
TITLE OF INVENTION: HTLV-I AND HTLV-II Peptide Antigens and
TITLE OF INVENTION: Methods
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
ADDRESSEE: Genelabs Technologies, Inc., Legal Dept.
...r.LCANT: Hadlock, Kenneth G.

Sequence 6, Application US/09260190

Patent No. 6096713

GENERAL INFORMATION:

APPLICANT: Green, Lawrence R.

TITLE OF INVENTION: Pharmaceutical Angiostatic Dipeptide

TITLE OF INVENTION: Compositions and Methods of Use Thereof

NUMBER OF SEQUENCES:

CORRESPONDENCE ADDRESS:

ADDRESSEE: Townsend and Townsend and Crew LLP

STREET: Two Embarcadero Center, Eighth Floor

CITY: San Francisco

STATE: California
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                          ö
          Peptides R90945-64 are derived from the factor VIII protein, esp. from a modified Factor VIII in which residues Ala322-Ser750, Leu1655-Arg1689, Lys1694-Pro1782 and Asp2170-Tyr2332 are deleted. The modified Factor VIII and derived peptides can be used to prevent the activity of inhibitors of factor VIII binding to von Willebrand factor, esp. antibodies, thus preventing or treating immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes cadherin modulating agents (MA) comprising peptides which comprise a nonclassical cadherin cell adhesion
                                                                                                                                                                                                                                                                                                                                                             Modulation; nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin.5; cadherin.5; cadherin.7; cadherin.8; cadherin.12; cadherin.12; cadherin.18; T-cadherin; PB-cadherin; cadherin related neuronal receptor; LI-cadherin; protocadherin; desmoglein; desmoglein; calcium binding; cancer; tumour; obesity; rheumatoid arthritis; multiple sclerosis; diabetes; metastasis; neurological disease; cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New cadherin modulating agents, used for modulating nonclassical cadherin-mediated functions for treating e.g. cancers, obesity, cheumatoid arthritis, multiple sclerosis, diabetes or a neurological
                                                                                                                                                                                                                                                                                                                                        Cadherin-8 cell adhesion recognition cyclic peptide SEQ ID NO:1679

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           expressing cell, preventing or treating obesity in a manmal, stimulating blood vessel regression in a mammal, enhancing drug delivery to the central nervous system, treating a demyelinating neurological disease, increasing vasopermeability in a mammal, enhancing adhesion of disease, conclassical cadherin-expressing cells, inhibiting synaptic stability in a mammal, or preventing pregnancy in a mammal. They can also be used for e.g. enhancing or directing neurite outgrowth, facilitating wound healing or reducing scar tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age-related macular degeneration, multiple sclerosis and diabetes. The products can also be used for detection and diagnosis and in bloreactors. Y60592 to Y64572 represent specifically claimed peptides, and Y64573 to Y64543 and 233183 to 233186 represent sequences used in the
                                                                                                                                                                                                                                                                                                                                                                              comprising peptides which comprise a nonclassical cadherin cell adhesion recognition (CAR) sequence. The MAs can be used for modulating nonclassical cadherin-mediated functions. They can be used for e.g. inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug through the skin of a mammal, an animal, inhibiting metastasis of a cancer in a mammal, inhibiting anglogenesis in a mammal, inducing apoptosis in a nonclassical cadherin-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                              New cadherin modulating agents, used for modulating nonclassical cadherin-mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     thyroid stimulating hormone receptor; TSH; human; Homo sapiens;
                                                                                                                                                                                                                                                                                                                                                  The present invention describes cadherin modulating agents (MA)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0;

carrier, esp. by a thiolether linkage to a cysteine residue added to the C-terminal or A-terminal end of the peptides, and used as immunogens in animals to produce immune lymphocytes.

A pure monoclonal antibody is capable of forming an immune complex with NVM LC-1 and has no capability of forming an immune complex buman fast skeletal myosin LC-1.

NVM LC-1 is diagnostic of myocardial infarction or other cardiomyuopathies.
                                                Human ventricular myosin light chain-1; antigen; monoclonal antibody;
immunoassay; myocardial infarction; diagnosis; cardiomyopathy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This peptide is an example of a peptide which binds to a human leucocyte artigen HLA-DD4 molecule. The peptide was isolated from a phagemid combinatorial library comprising the sequence V05953, by screening with an HLA-DD4 molecule. The peptide is used for the treatment of autoimmune disease, or especially for treatment of viral diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;
(preferably 2) mannose can be attached to increase their uptake as antigens by antigen-presenting cells. Uptake of agonist mannosylated peptides will increase the T cell response, whereas uptake of antagonist peptides blocks the T cell response. Blocking binding of immunogenic autoantigens can be used in treatment of type I diabetes, rheumatoid arthritis, graft rejection etc., also to induce T cell non-responsiveness. Vaccines containing mannosylated antigen are used to prevent or treat infections by, e.g. bacteria, viruses, fungi, helminths
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present peptide is an immunogenic epitope which is recognised by the CD8+ class I major histocompatibility complex (MHC) restricted cytocoxic T-lymphocytes of patients harboring latent HCMY infection. If the peptide is claimed to be capable of activating cytotoxic T-cell lymphocytes in the absence of active viral replication, and thus is useful for eliciting a cellular immune response against HCMV by normal and immunodeficient subjects. The immunological peptide can also be formulated as a vaccine which is claimed to be useful for protecting against HCMV infection, augmenting the immune system response to a HCMV infection or protecting against reactivation of a latent HCMV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Immunogenic epitope; human cytomegalovirus; HCMV; vaccine; CTL;

The present invention describes immunologically active peptides (1APs) capable of eliciting a cellular immune response to human cytom. Interiors (NCW). The IAP can be used in a (cellular) vaccine to augment the immune system response to HCW, or to provide immunity against HCW. The immune system reactivation. Or to provide immunity against HCW rhe IAP (cellular) vaccine can also protect an individual having a laterior in the presence or absence of HCWV-infected T lymphocytes. The viral vector containing IAP encoding DNA can also be used to provide immunity against HCWY. The IAP can be used to prepare HCMY rearritive human cytotoxic T lymphocytes. The antigen presenting cells primed with the IAPs can be used as diagnostic reagents to detect immunostimulation by HCMY. They can also detect active HCMY infection or exposure to HCMY on cause opportunistic infections resulting in a variaty of complications in, e.g. immunosuppressed patients. The IAP vaccines impart immunity to bone marrow transplant recipients, solid organ recipients, heart patients, AIDS patients or women of child-bearing years, without the need for ex vivo expansion of HCMY-specific cytoloxic I lymphocytes (which requires sophisticated laboratory setup and is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ö

                                                                                                                                                      Synthetic.
  The present sequence represents a specific example of an immunogenic peptide which was used in a new method of inducing a cytotoxic T cell (CTL) response against a preselected antigen in a patient. The method comprises contacting CTLs from the patient with the immunogenic peptide (containing defined motifs) which binds one of the four HLA MHC products HLA-A3.2, HLA-A1, HLA-A11 or HLA-A3.4.1, the peptide having a dissociation constant (Kd) of less than 5 x 10-7 M. Immunogens are viral, e.g human immunodeficiency virus type I (HIV-1), hepatitis B virus (HBV) and hepatitis C virus (HCV) or cancer antigens and are used in vaccines for the prevention and treatment of viral infection and cancer. The immunogens may be administered to the patient as a nucleic acid encoding

The present invention describes cadherin modulating agents (MA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

cecognition (CAR) sequence. The MAs can be used for modulating

crecognition (CAR) sequence. The MAs can be used for modulating

crecognition (CAR) sequence. The MAs can be used for e.g.

inhibiting adhesion of nonclassical-cadherin expressing cells in a

comman, enhancing delivery of a drug to a tumour in a mammal, treating cancer in

cenhancing delivery of a drug to a tumour in a mammal, inhibiting

compressing cell, preventing or treating obesity in a mammal, simmilating

concressing vasopermeablisty in a mammal, enhancing drug delivery to the

central nervous system, treating a demyelinating neurological disease,

increasing vasopermeablisty in a mammal, enhancing and disease,

conclassical cadherin-expressing cells, inhibiting synaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for

cor reducing scar tissue, or enhancing adhesion of foreign tissue, or

conclasted macular degeneration, multiple sclerosis and diabetes. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             products can also be used for detection and diagnosis and in
Dioreactors. 760592 to 764572 represent specifically claimed peptides,
and Y64573 to Y64643 and 233183 to 233186 represent sequences used in the
exemplification of the present invention.
New cadherin modulating agents, used for modulating nonclassical cadherin-mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological
                                                                                                                                                                                                                                                          Claim 60; Page 188; 252pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes cadherin modulating agents (MA) compriss a nonclassical cadherin cell adhesion recognition (CAR) sequence. The MAs can be used for modulating nonclassical cadherin-mediated functions. They can be used for e.g. inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug through the skin of a mammal, a mammal, inhibiting an amammal, inhibiting a mammal, inhibiting a mammal, inhibiting expressis of a cancer in a mammal, inhibiting expressis in a mammal, inhibiting expressing cell, preventing or treating obesity in a mammal, stimulating blood vessel regression in a mammal, enhancing delivery to the central nervous system, treating a demyelinating neurological disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         increasing vasopermeability in a mammal, enhancing adhesion of nonclassical cadherin-expressing cells, inhibiting synaptic stability in
                                                                                                                                                                                                           Modulation; nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin; cadherin-5; cadherin-7; cadherin-8; cadherin-12; cadherin-12; cadherin-12; cadherin-13; T-cadherin; PB-cadherin; desmoglein; desmoglein; calcium binding; cancer; tumour; obesity; rheumatoid arthritis; multiple sclerosis; diabetes; metastasis; neurological disease; cyclic.
                                                                                                                                                                                                                                                                                                                                                                       /note= "the terminal residues are condensed with each

a mammal, or preventing pregnancy in a mammal. They can ..1so be used for e.g. enhancing or directing neurite outgrowth, facilita, ..., wound healing or reducing scar tissue, or enhancing adhesion of foreign tissue. In a mammal. They can also be used for treating e.g. psoriasis, arthritis, age-related macular degeneration, multiple sclerosis and diabetes. The products can also be used for detection and diagnosis and in bioreactors. Y60592 to Y6572 represent specifically claimed peptides, and Y64573 to Y6643 and 231186 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Caps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ing region of the CS protein of plasmodium. It can be used in a vaccine for protection against malaria. The peptide is pref.linked to a 2nd peptide from the 1st flanking domain and the resulting polypeptide fused to a carrier protein, e.g tetanus toxoid, diptheria toxin or cholera B toxin. A preferred vaccine comprises 81 N-terminal AAs of the influenza virus nonstructural protein 1 (NSIB1), fused, via a synthetic linker, to a 1st flanking region of the CS protein, which is itself fused to a 2nd flanking region of the CS protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The peptide is a sporozoite neuralising epitope from the 2nd flank
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Polypeptide comprising immunogenic determinants from P talciparum - for vaccine against malaria infection in humans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Immunogenic determinant; circumsporozoite; CS; vaccine; malaria;
